Client Side
1.

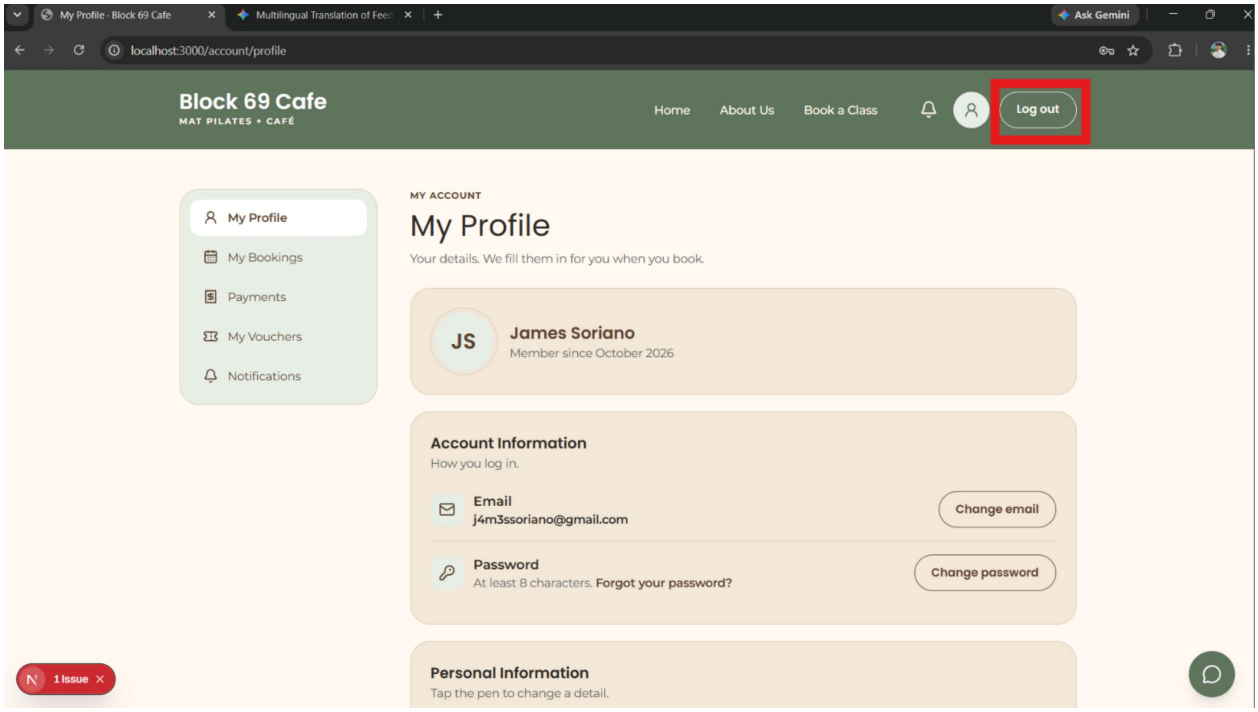

Pagename: Policies and Agreement Page
Pagelink: http://localhost:3000/policies#agreement
Concern: The chat with us is redundant, because we already have chat button in the lower right
Resolution: Remove the " Something not clear? Ask us before you book." and Chat With Us Button
Prompter Comment: Will Do

2.

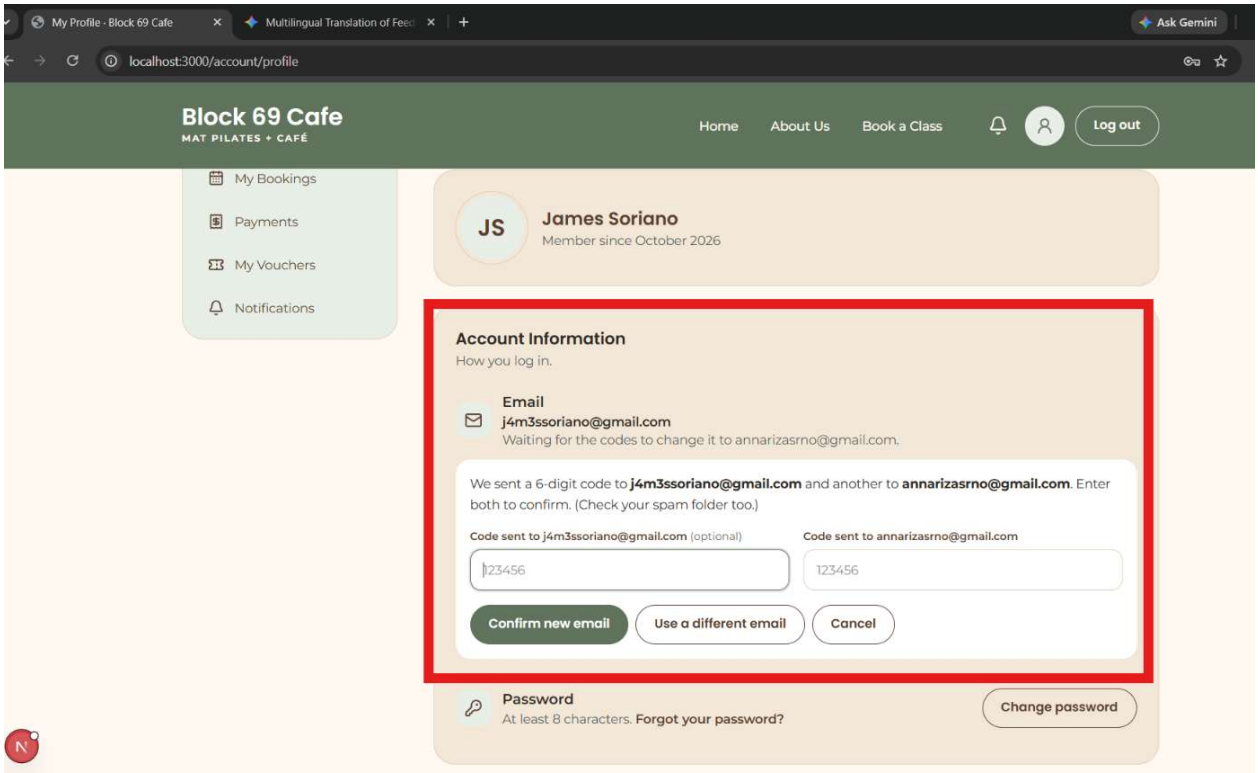

Pagename: Client Log In Page
Pagelink: http://localhost:3000/login
Concern: Its unnecessary to have the “Save Log In Next Time” because Google automatically asks that.
Resolution: Remove the “Save Log In Next Time”
Prompter Comment: Will Do

3.

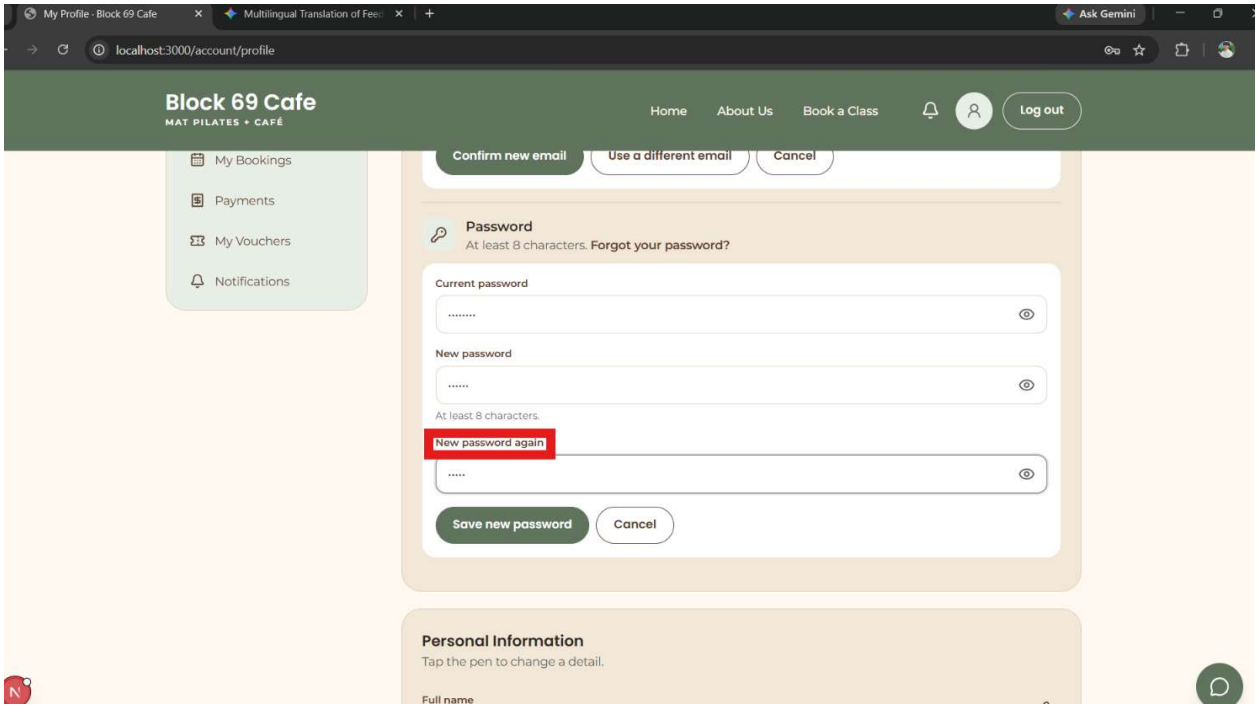

Pagename: Client My Profile Page
Pagelink: http://localhost:3000/account/profile
Concern: When the client Logged in their account. Its much better if we will move the log out button to the “My Profile” Page
Resolution: Move the log out button to the “My Profile” Page
Prompter Comment: Will Do

4.

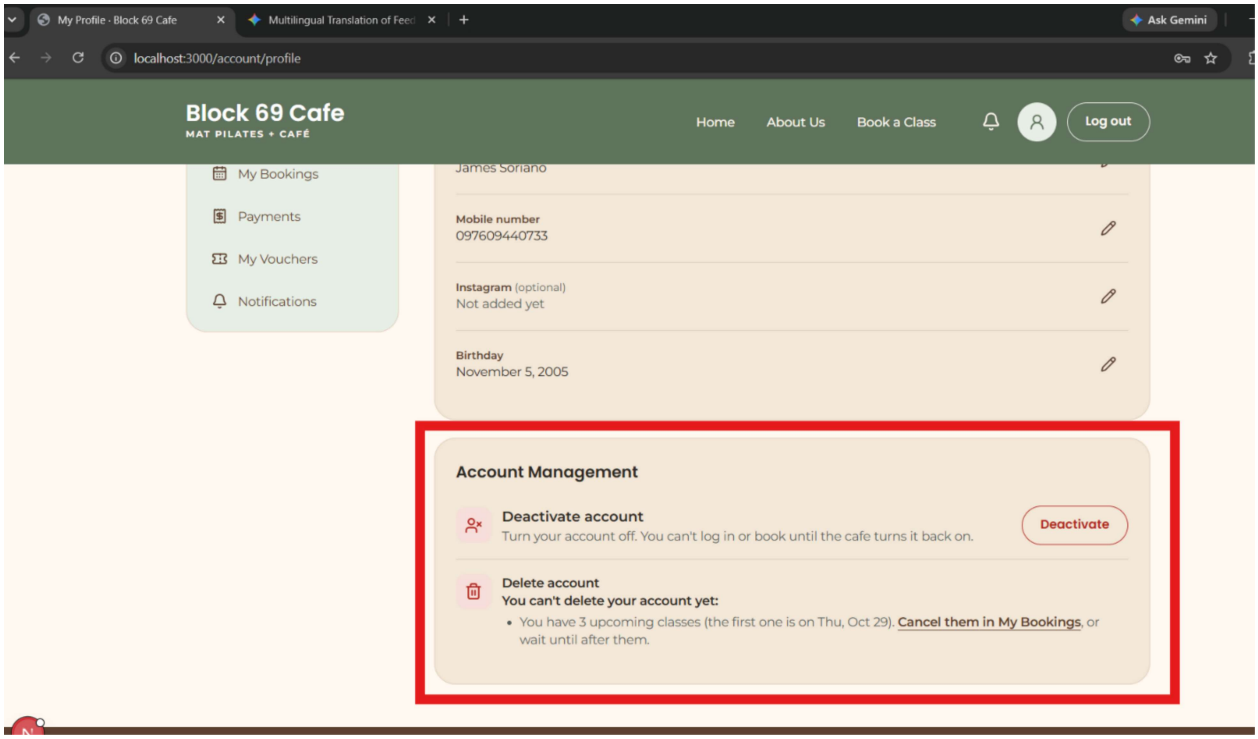

Pagename: Client My Profile Page
Pagelink: http://localhost:3000/account/profile
Concern: The current email change flow requires entering two simultaneous 6-digit verification codes inline on the profile page, which is confusing and non-standard.
Resolution: Simplify the flow. Prompt the user for their current password to authorize the change, send a single verification code only to the new email to confirm ownership, and send an automated security alert notification to the old email.
Prompter Comment: Will Do

5.

Pagename: Client My Profile Page
Pagelink: http://localhost:3000/account/profile
Concern: Its much better if we will change the label "New password again" should be renamed to "Confirm new password"
Resolution: Change the label "New password again" should be renamed to "Confirm new password"
Prompter Comment: Will Do

6.

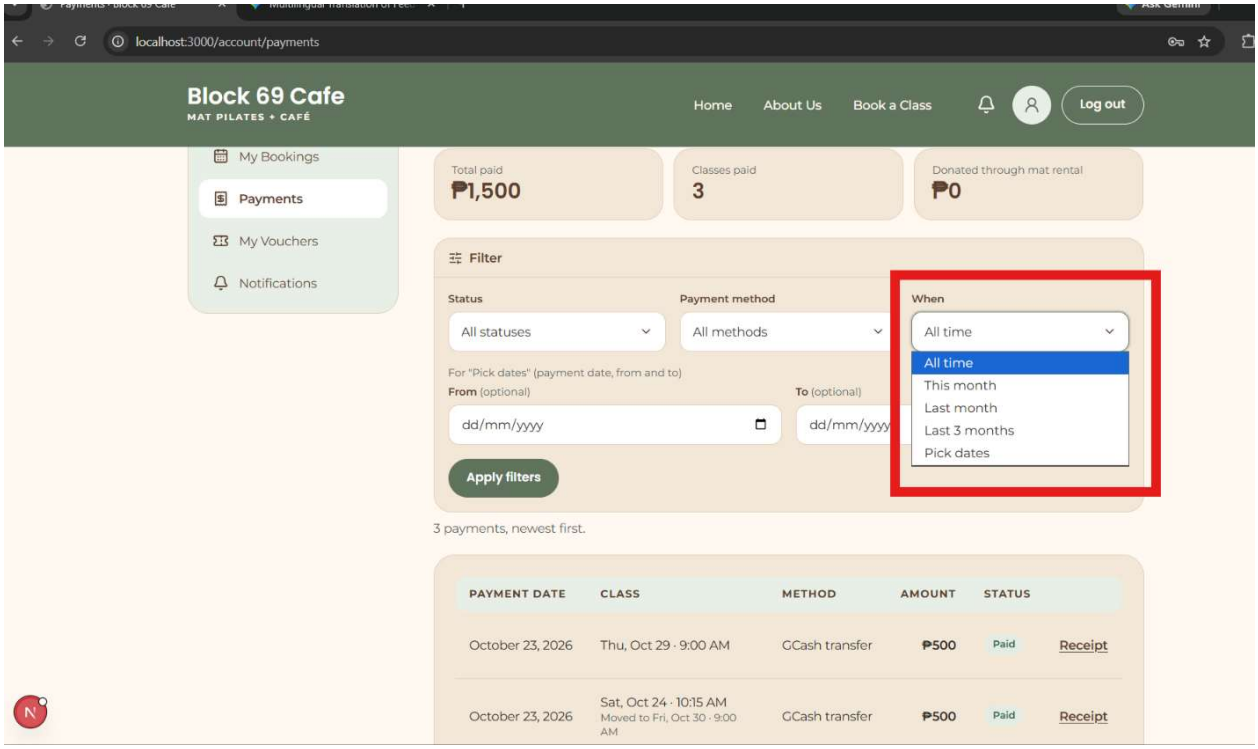

Pagename: Client My Profile Page
Pagelink: http://localhost:3000/account/profile
Concern: The current account deactivation flow states that users cannot log in or book until cafe staff manually turns the account back on. This creates unnecessary operational overhead for staff and treats voluntary deactivation like an administrative ban or suspension.
Resolution:

1. Self-Service Reactivation: Make deactivation completely reversible by the user upon their next login with a simple confirmation prompt, without requiring staff intervention.
2. Change the description text to: "Temporarily disable your account. You can reactivate anytime simply by logging back in."
3. Handle Active Bookings: Ensure the deactivation action checks for upcoming classes and either prompts the user to cancel them first (matching the delete logic) or clearly clarifies booking handling before confirmation.
4. Standardize UI: Add a disabled Delete account button alongside the explanation to maintain consistent visual alignment across both options in the Account Management card.

Prompter Comment: Will Do

7.

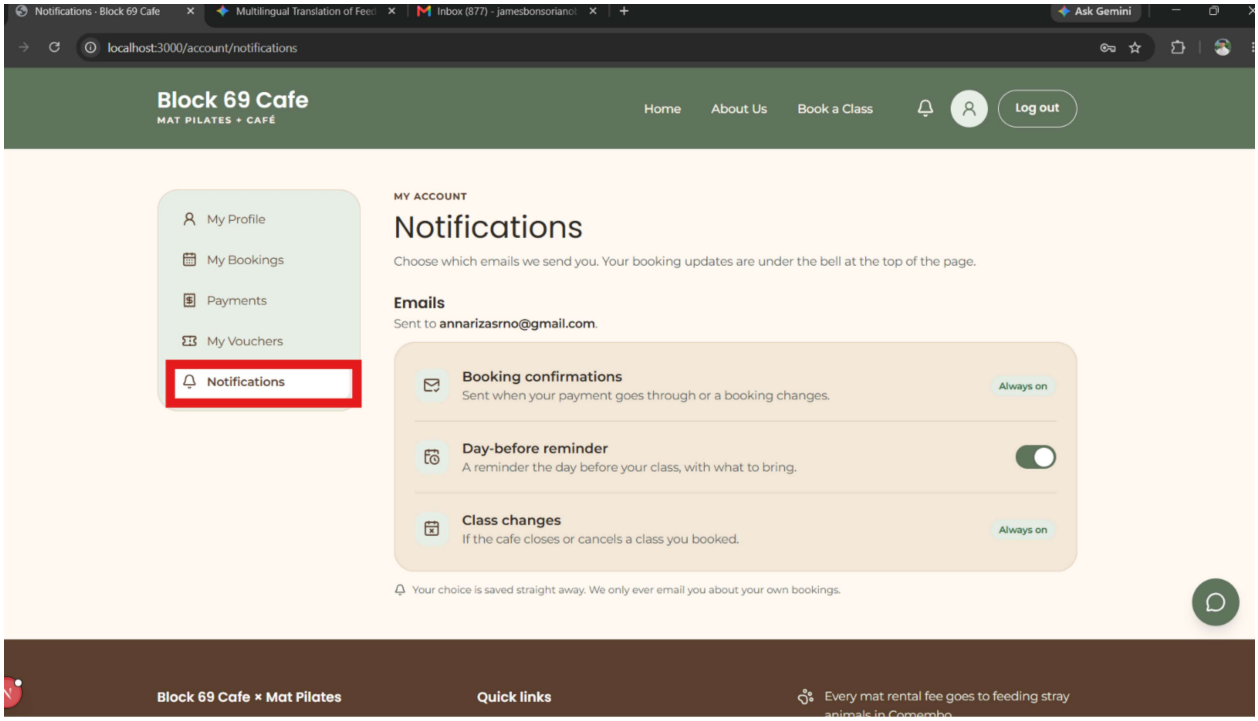

Pagename: Client My PaymentsPage
Pagelink: http://localhost:3000/account/payments
Concern: The date filter shows custom From and To inputs even when a preset like "All time" is selected, accompanied by an awkward helper text ("For 'Pick dates'..."). Additionally, the label "When" is non-standard.
Resolution:

1. Hide the From and To date inputs by default; render them only when the user selects "Pick dates" (or use a date range picker component).
2. Remove the text "For 'Pick dates' (payment date, from and to)".
3. Change "When" to "Date Range" or "Date".
4. Include a "Clear" or "Reset filters" button next to "Apply filters".

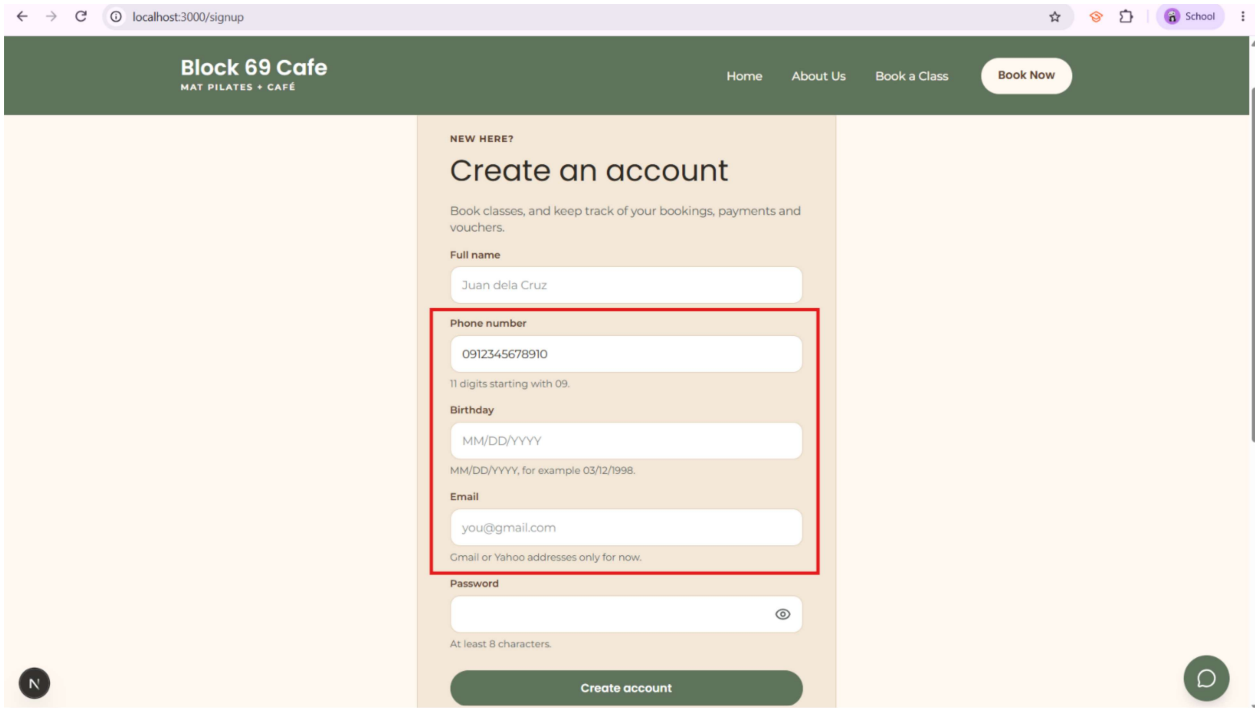

Prompter Comment: Will Do

8.

Pagename: Client Notifications Page
Pagelink: http://localhost:3000/account/notifications
Concern: The Notifications is confusing because there is already notification in the nav bar
Resolution: Change the Word from “Notifications” To “Notification Settings”
Prompter Comment: Will Do

9.

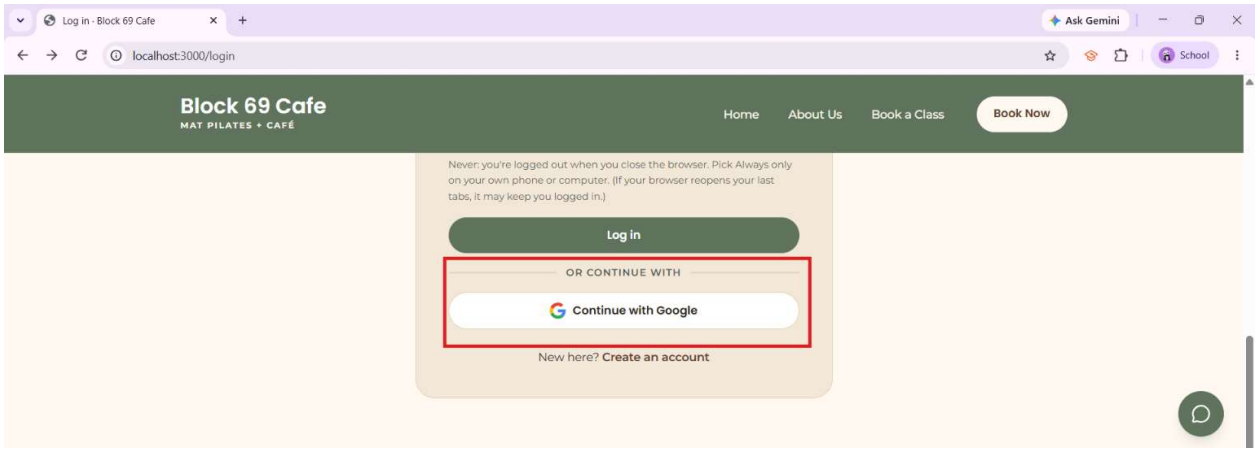

Pagename: Client Sign in Page
Pagelink: http://localhost:3000/signup
Concern: The phone number field accepts more than 13 digits. remove the note “11 digits starting with 09” under the phone number field, the note “MM/DD/YYYY, for example 03/12/1998” and the note “Gmail or Yahoo addresses only for now”
Resolution:

1. Fix the phone number field to accept only 11 digits
2. remove the note “11 digits starting with 09” under the phone number field
3. remove the note “MM/DD/YYYY, for example 03/12/1998”
4. remove the note “Gmail or Yahoo addresses only for now” under the email field

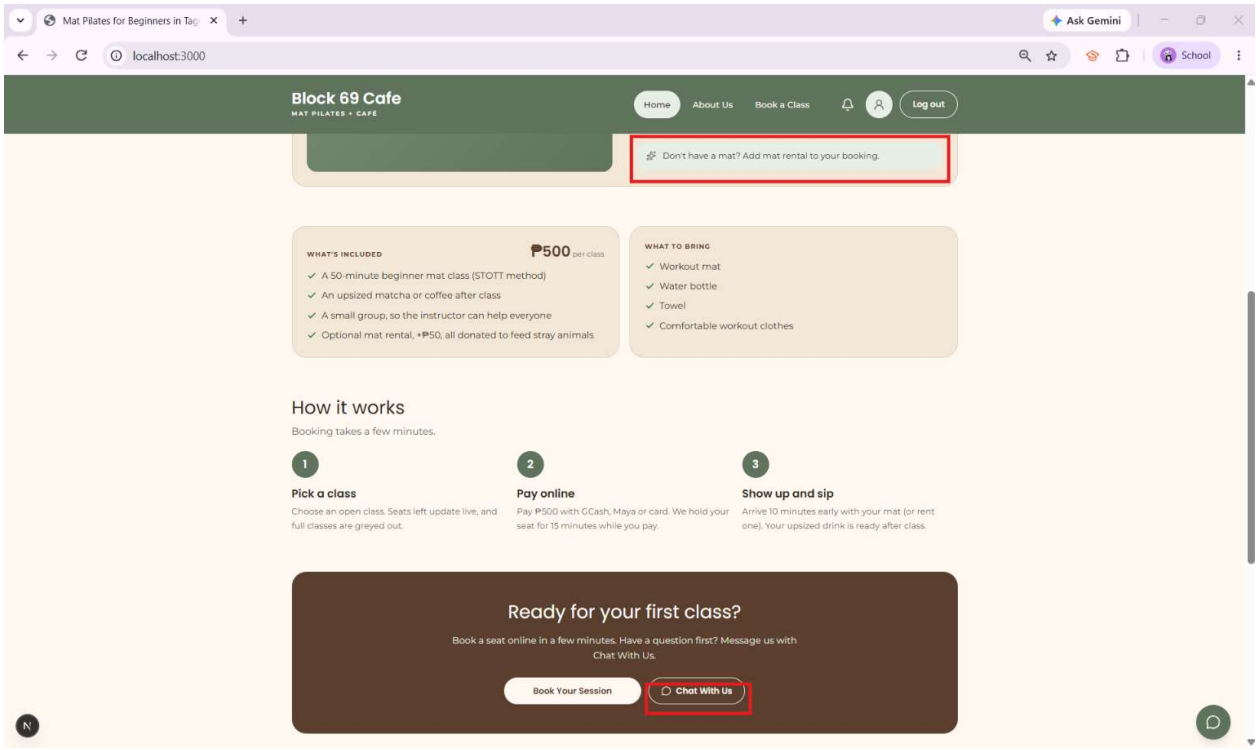

Prompter Comment: Will do

10.

Pagename: Client Log-in Page
Pagelink: http://localhost:3000/login
Concern: The Google sign-in button shows an error because Google login is not enabled in Supabase
Resolution: Enabled Google login in Supabase so clients can sign in using their Google accounts
Prompter Comment: Will Do

11.

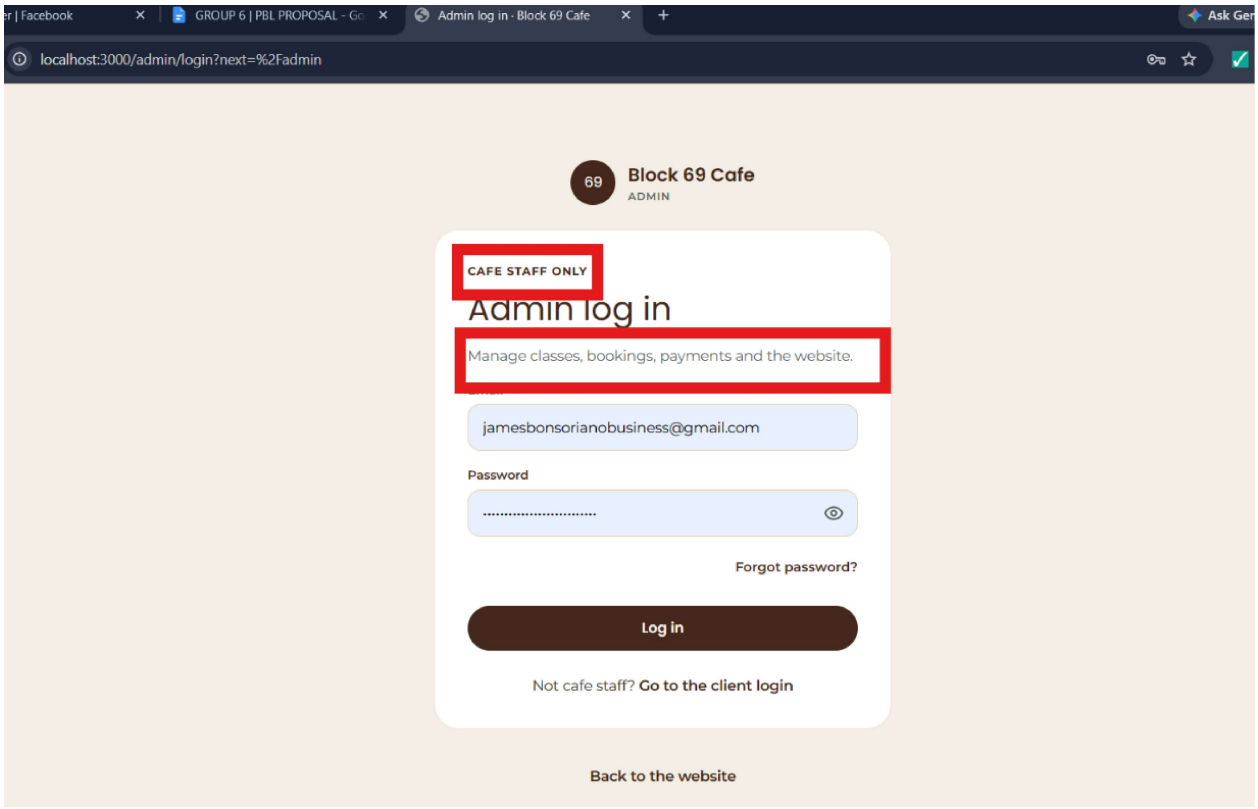

Pagename: Client Home Page
Pagelink: http://localhost:3000
Concern: The mat rental note is in the wrong place and is not clickable. It does not direct clients to the booking page. The “Chat With Us” button beside “Book Your Session” is also redundant.
Resolution:

1. Add a new mat rental note stating that rental costs ₱50 and 100% of the proceeds will be donated to help feed stray animals in Taguig
2. make the note clickable to direct clients to the booking page to add mat rental to their booking
3. Remove the “Chat With Us” button beside “Book Your Session.”

Prompter Comment: Will do the revisions in regards to the Mat Rental, but the “Chat with Us Button” Revision is already on the docs. That is the number 1 revision for the client side. Please read the previous revisions so that we can save tokens for claude code.

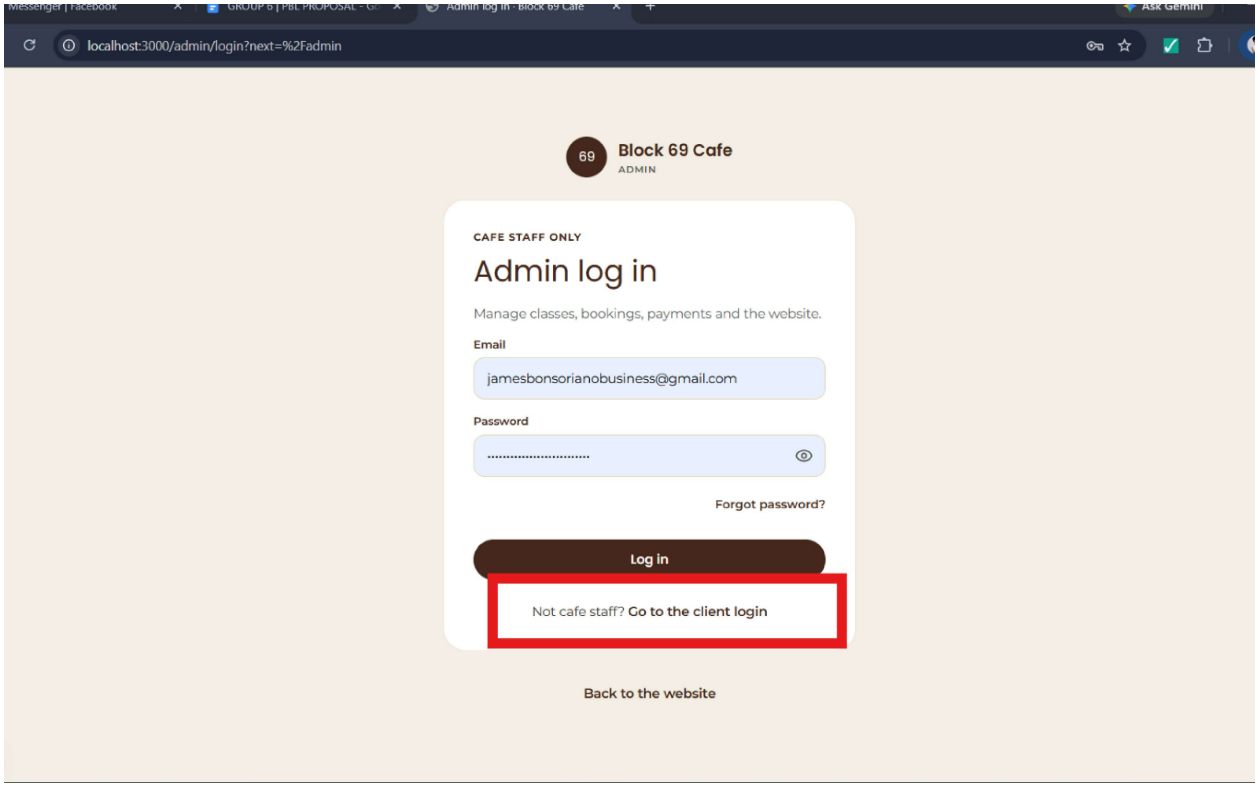

==========

Admin Side

1. 

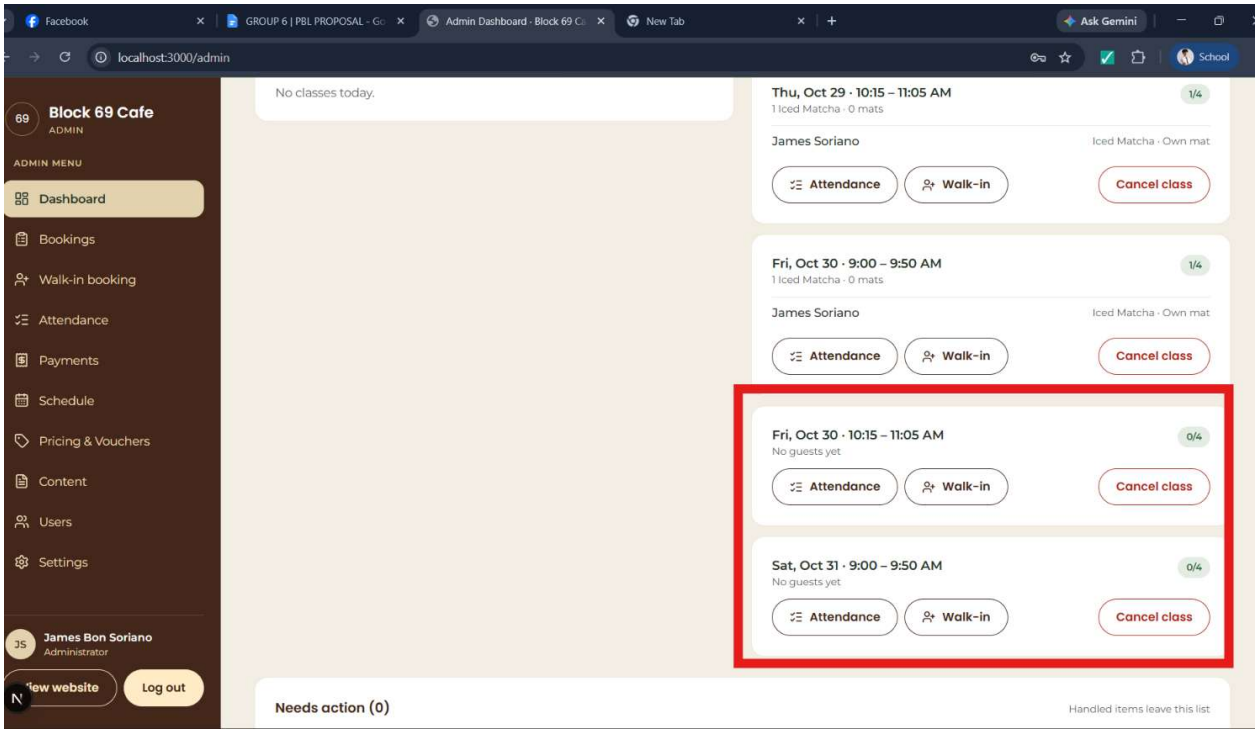

Pagename: Admin Log In
Pagelink: http://localhost:3000/admin/login?next=%2Fadmin
Concern: It feels way too vibe-coded if we add the line " Manage classes, bookings, payments and the website."
Resolution: Remove the " Manage classes, bookings, payments and the website."
Prompter Comment: Will Do

2.

Pagename: Admin Log In
Pagelink: http://localhost:3000/admin/login?next=%2Fadmin
Concern: The admin portal and client portal should remain strictly separated, and cross-routing links between them should not be exposed on the both login page.
Resolution: Remove the “Not cafe staff? Go to the client login” and “Back to the website” link.
Prompter Comment: Will Do

3.

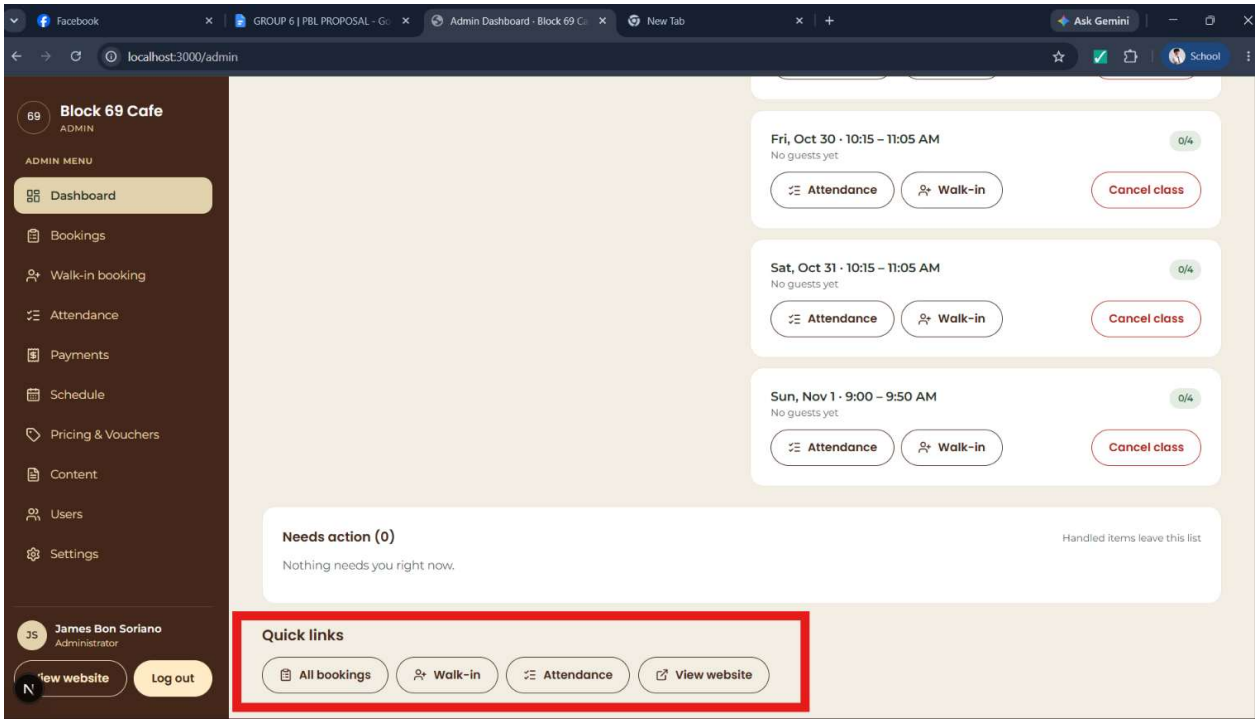

Pagename: Admin Dashboard
Pagelink: http://localhost:3000/admin
Concern: The "Next classes" list displays too many session cards at once, creating vertical page bloat on the admin dashboard and pushing lower sections out of view.
Resolution:

1. Have both "Today's classes" and "Next classes" to display a maximum of 2 cards.
2. Add a "View all" button or link aligned to the right side of the section headers (e.g., beside "Today's classes" and "Next classes") that routes the admin to the full Schedule page (/admin/schedule).

Prompter Comment: Will Do

4.

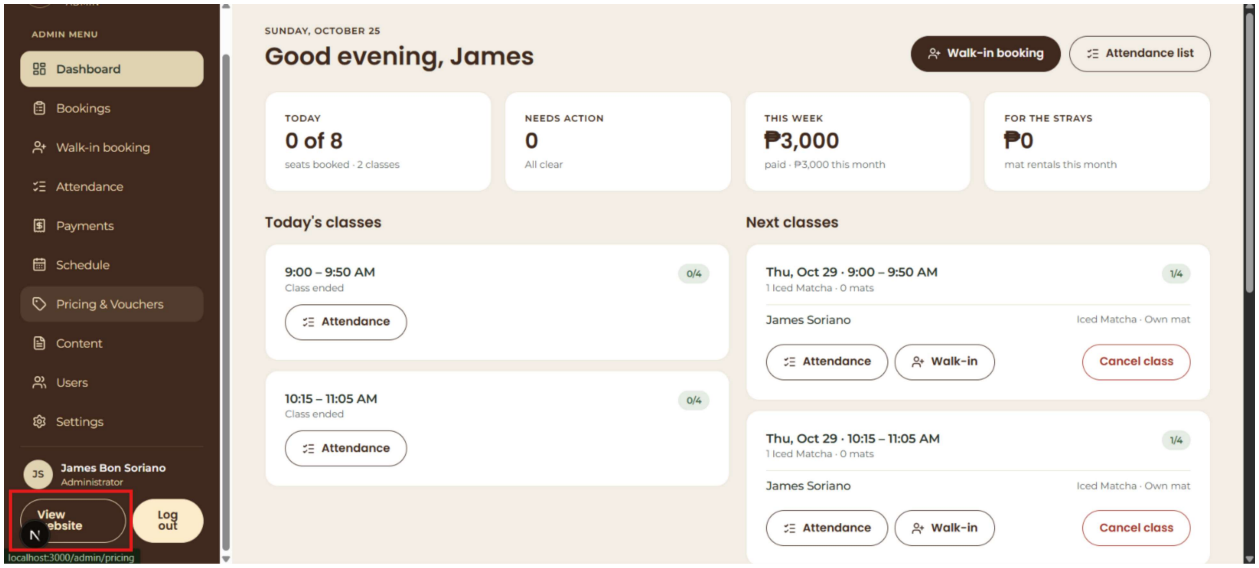

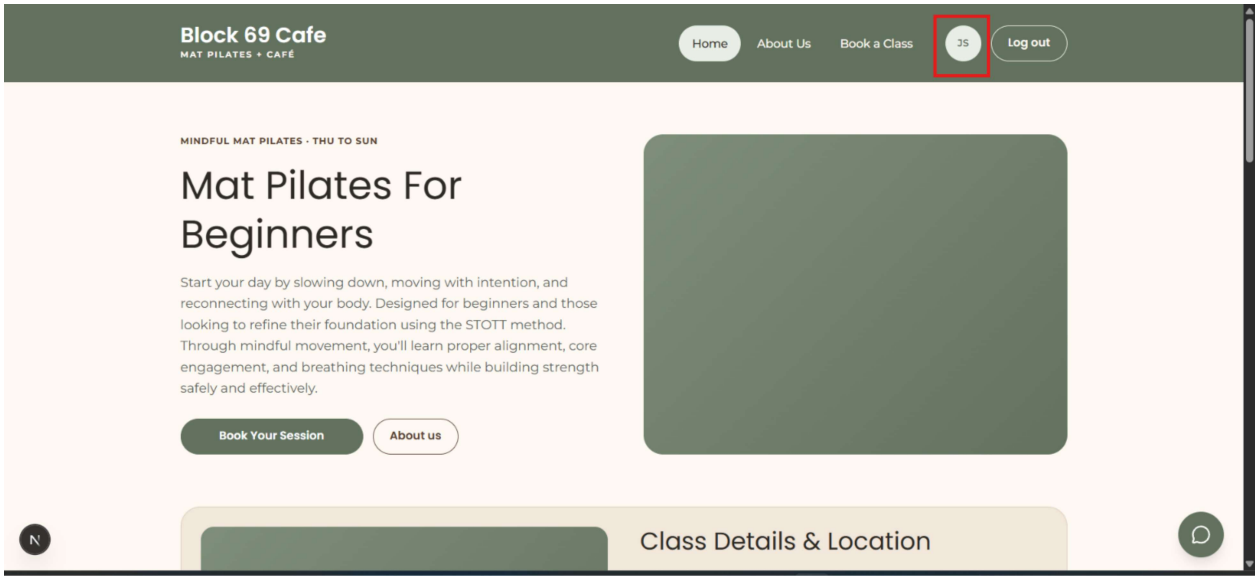

Pagename: Admin Dashboard
Pagelink: http://localhost:3000/admin
Concern: The "Quick links" card at the bottom only duplicates a few arbitrary items already present in the sidebar (Bookings, Walk-in, Attendance), making it redundant and incomplete.
Resolution:
Resolution:

1. **Remove the basic "Quick links" section:** Replace this arbitrary button strip.
2. **Dashboard Overview Grid / Mini Modules:** Instead of simple duplicate buttons, display compact summary cards (or mini widgets) corresponding to the key modules in the sidebar (e.g., Bookings, Payments, Attendance, Schedule, Users).
3. **Add "View full" Actions:** Keep each module card minimized with high-level stats/recent activity, and include a **"View full"** button or link on each card that routes directly to its corresponding page in the sidebar.

Prompter Comment: Will Do

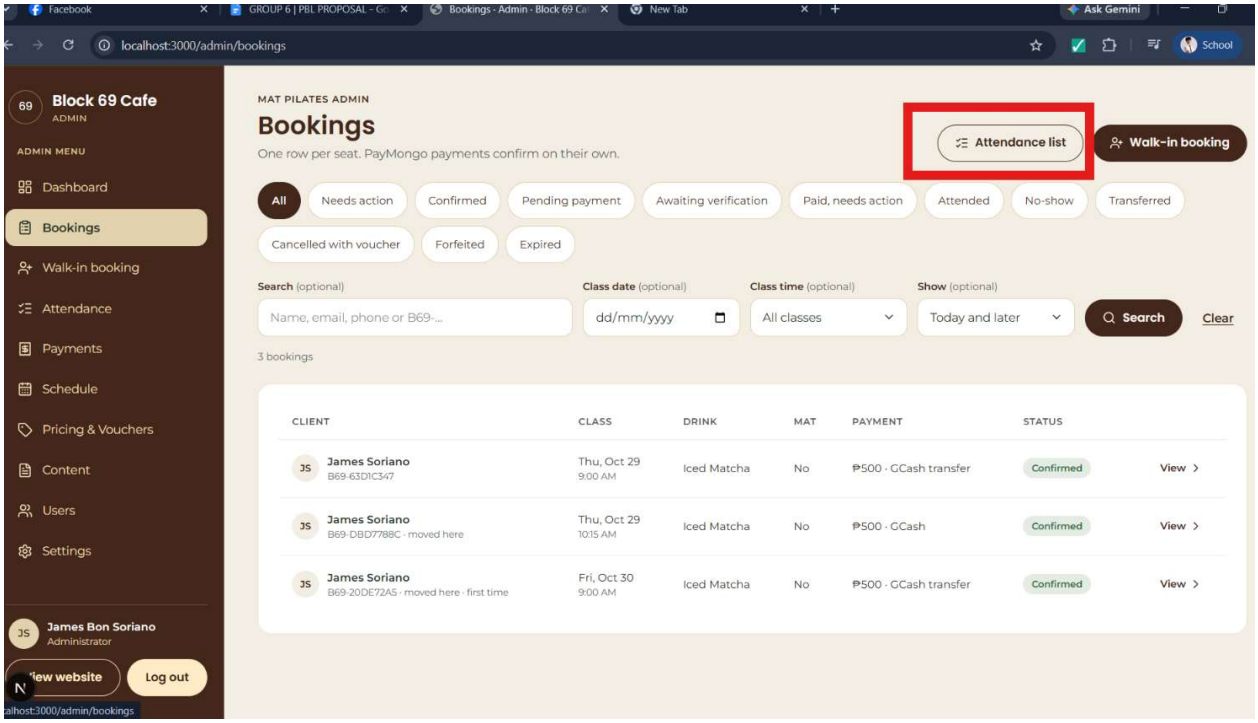

5.

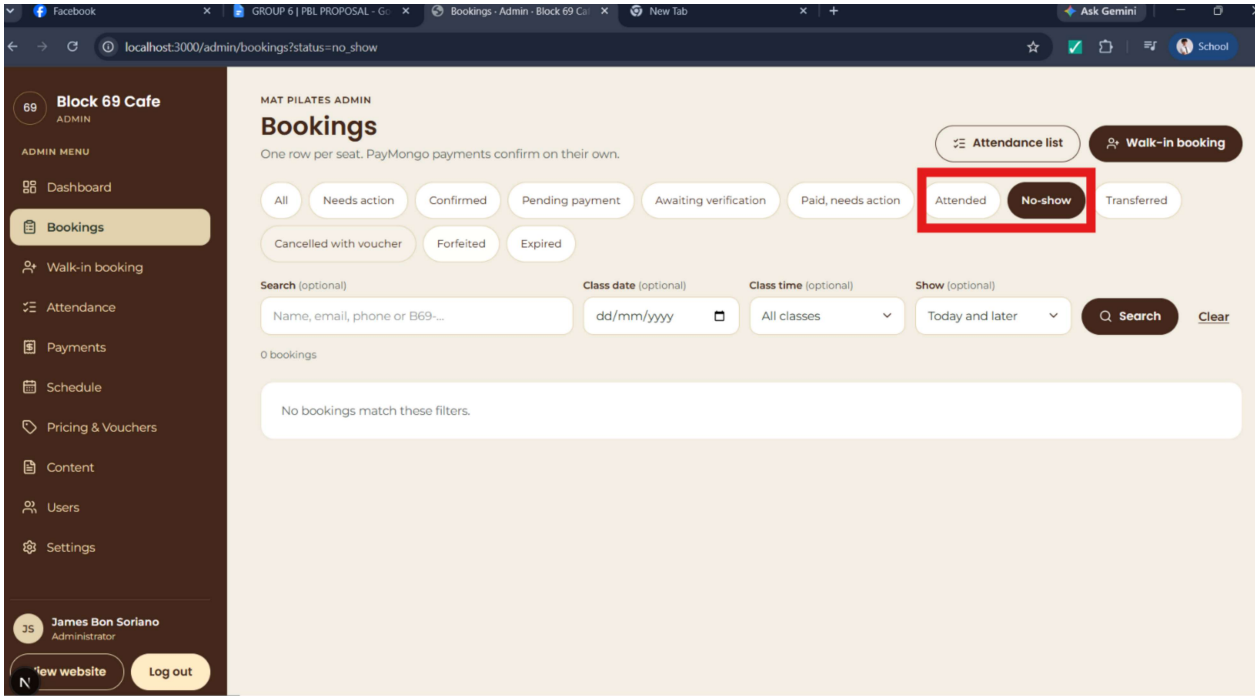

Pagename: home page in admin and client side
Pagelink: http://localhost:3000/admin, http://localhost:3000
Concern: when the administrator view the website, the admin account is also logged in on the client side.
Resolution: Client must be able to log in even when the administrator is logged in on the admin side. The client and admin side must be strictly separated.
Prompter Comment: The concern is okay, but the resolution is technically not the right reso here. Browsers share session cookies across all tabs under localhost:3000 by design. Attempting to support two simultaneously logged-in accounts on the same browser profile creates unnecessary session conflicts. If the goal is testing both roles concurrently, the standard practice is testing the client side in an Incognito tab or browser account. If the goal is preventing admins from accessing client features, that should be solved via role-based access permissions

6.

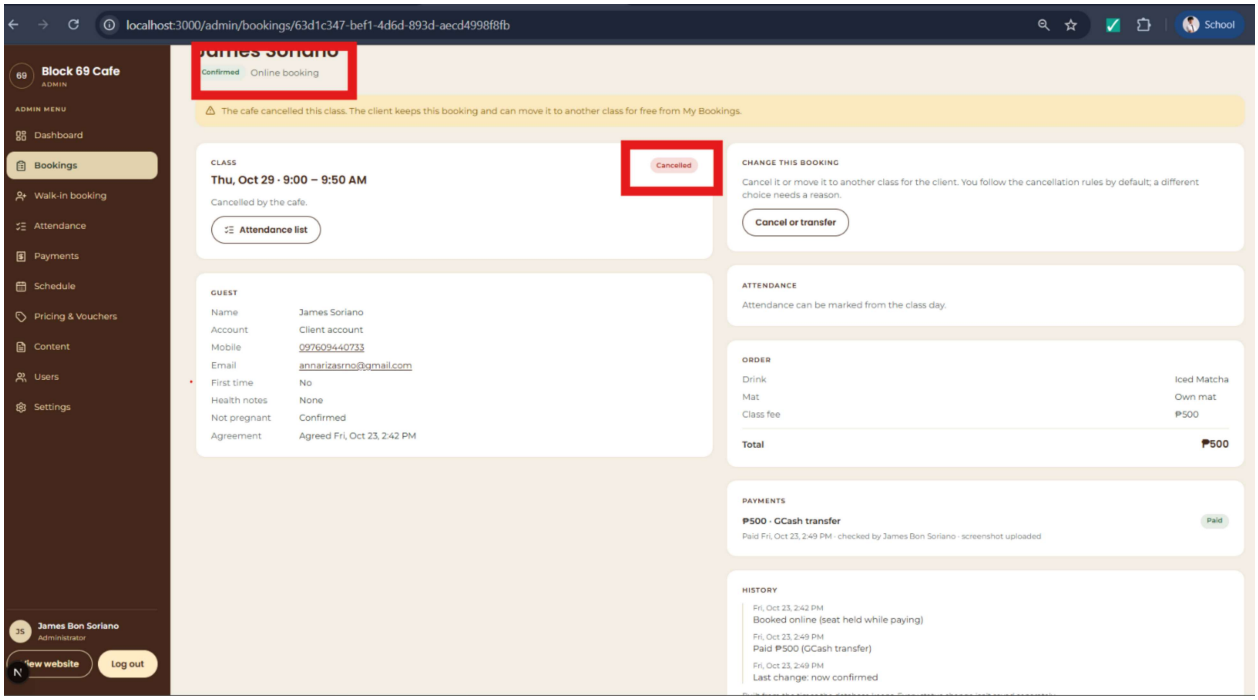

Pagename: bookings page
Pagelink: http://localhost:3000/admin/bookings
Concern: The Attendance list page will be remove”
Resolution: Remove the “Attendance List” Button
Prompter Comment: Will Do

7.

Pagename: bookings page
Pagelink: http://localhost:3000/admin/bookings
Concern: The Attendance list page will be remove”
Resolution: Remove the “Attended” and “No Show” Sort Button.
Prompter Comment: Will Do

8.

Pagename: Admin Booking Details

Pagelink: http://localhost:3000/admin/bookings/[id]

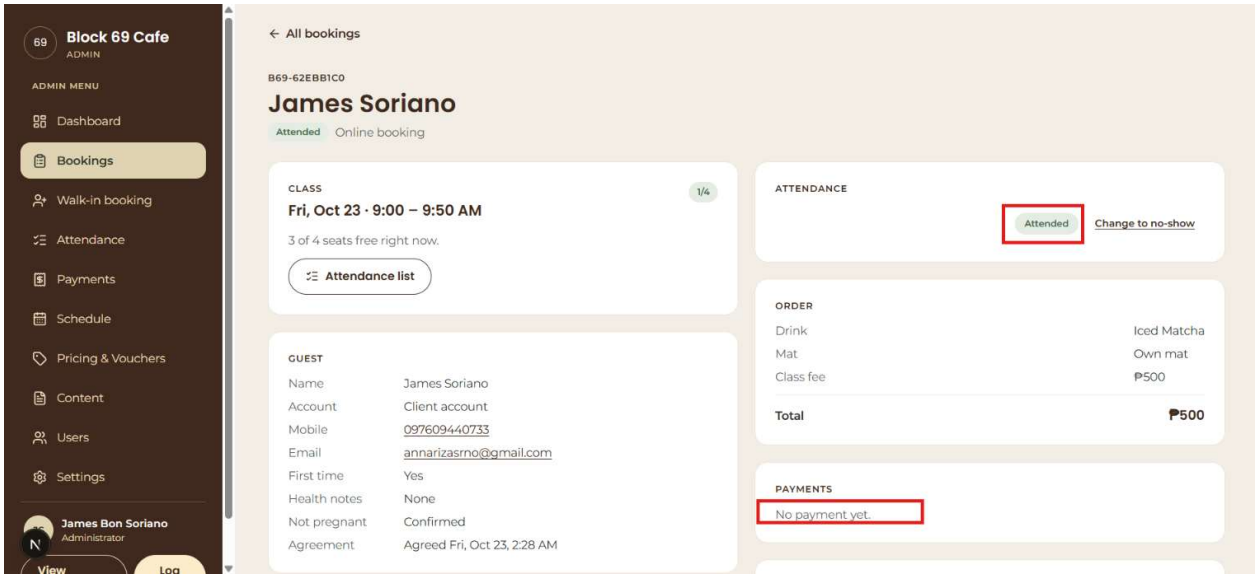

Concern:

When a scheduled class is cancelled by the cafe, the booking details view contains conflicting status states. The header still displays a green "Confirmed" badge while the class card displays "Cancelled". Furthermore, actions like "Cancel" and attendance tracking remain visible or active despite the session being terminated.

Resolution:

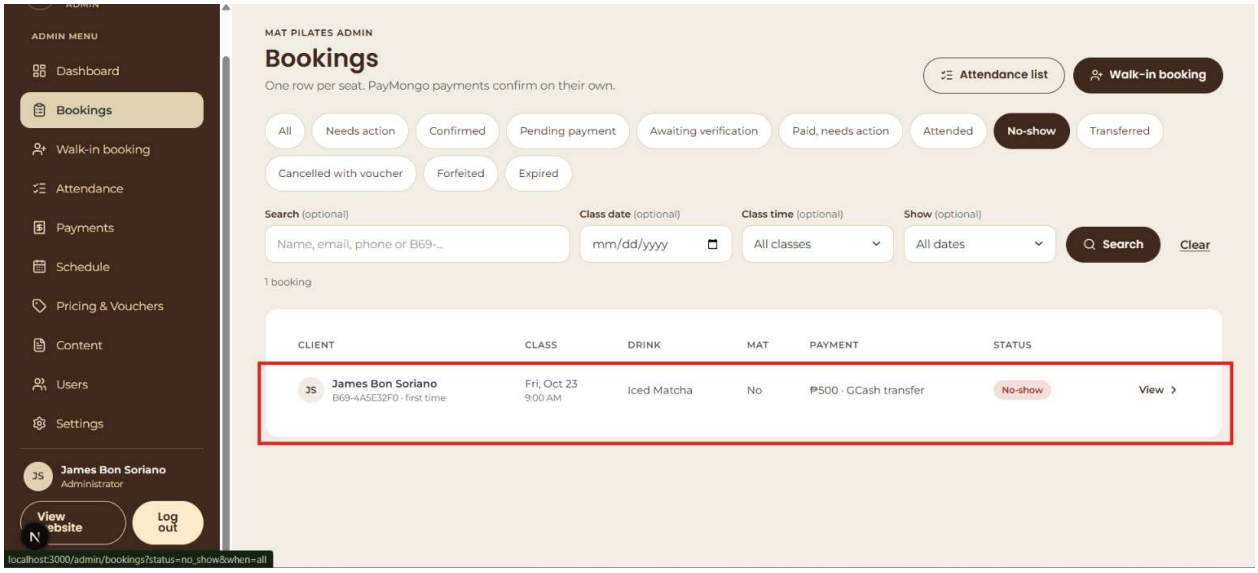

1. **Synchronize Status Indicators:** When a parent class is cancelled, update the booking's primary header badge from "Confirmed" to **"Class Cancelled"** or **"Needs Reschedule".**
2. **Context-Aware Actions:** Change the action button from "Cancel or transfer" to **"Transfer".** Disable or remove the option to re-cancel an already-cancelled session.
3. Remove Attendance Card
4. **Refine Banner Copy:** Professionalize the warning alert text to clearly state the credit/transfer state of the affected customer.
5. Have a print button feature. Don;t make the print feature as print website screen. Make it like a real receipt

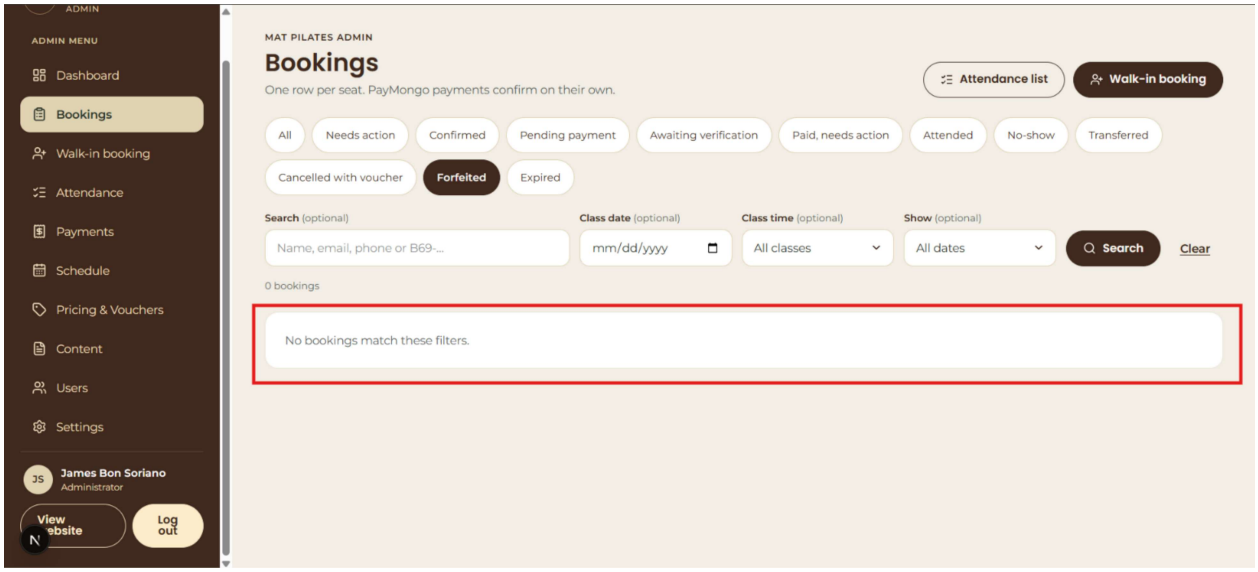

9.

Pagename: bookings page
Pagelink: http://localhost:3000/admin/bookings
Concern: the client can attend their booked session even when full payment is not made. They have a policy “Full payment is required to confirm your booking.”
Resolution: The client can only attend their session when full payment is received before their session.
Prompter Comment: Will Do

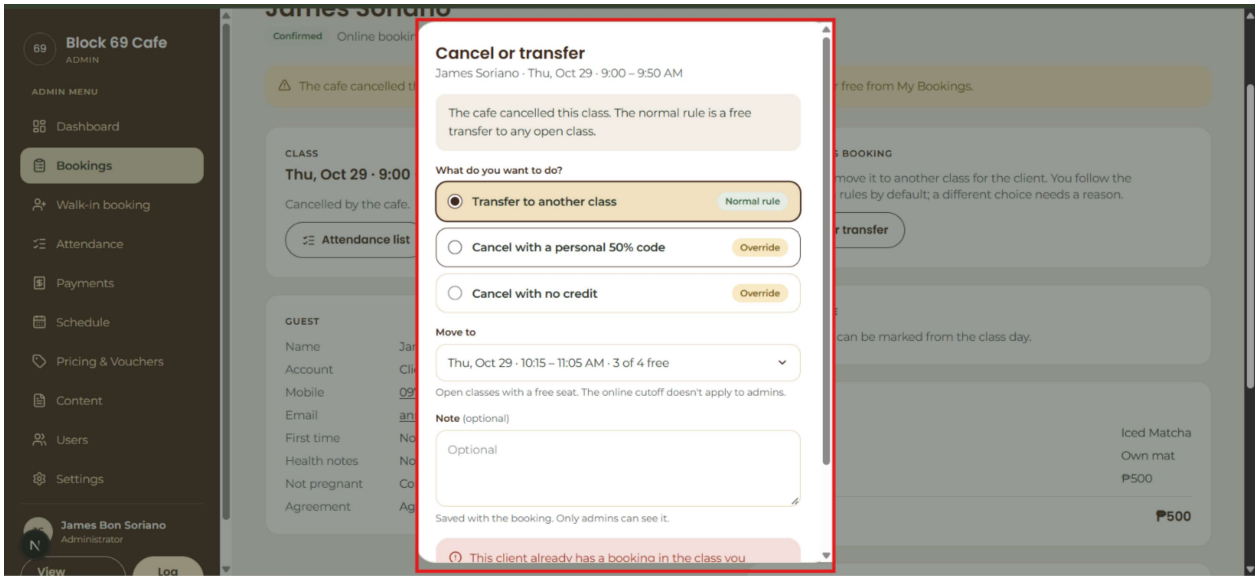

10.

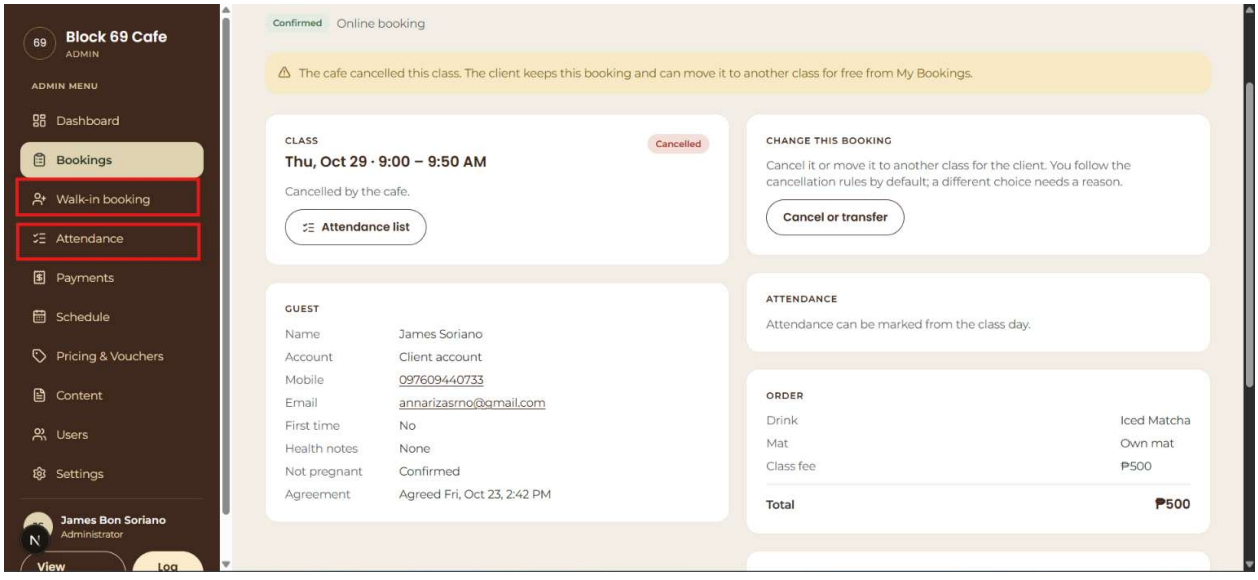

Pagename: bookings page
Pagelink: http://localhost:3000/admin/bookings?status=no_show, http://localhost:3000/admin/bookings?status=forfeited
Concern: client who didn't attend their sessions does not show in the forfeited tab. They have a policy: "No-shows will automatically forfeit their booking."
Resolution: No-show client bookings must also be displayed in the forfeited tab
Prompter Comment: Will Do

6.

Pagename: bookings page
Pagelink: http://localhost:3000/admin/bookings/63d1c347-bef1-4d6d-893d-aecd4998f8fb
Concern: admin able to transfer client to another session.
Resolution: the client must only be allowed to transfer sessions to a later available date after they cancel.
Prompter Comment: Will Do. The admin should not manually reassign the client to a specific schedule slot. When a class is cancelled, the system should issue a class credit or transfer token to the customer's account so the client can self-select their preferred replacement date/time from their own portal. The admin modal should focus on cancellation, refunding, or granting credit rather than forcing a schedule reassignment.

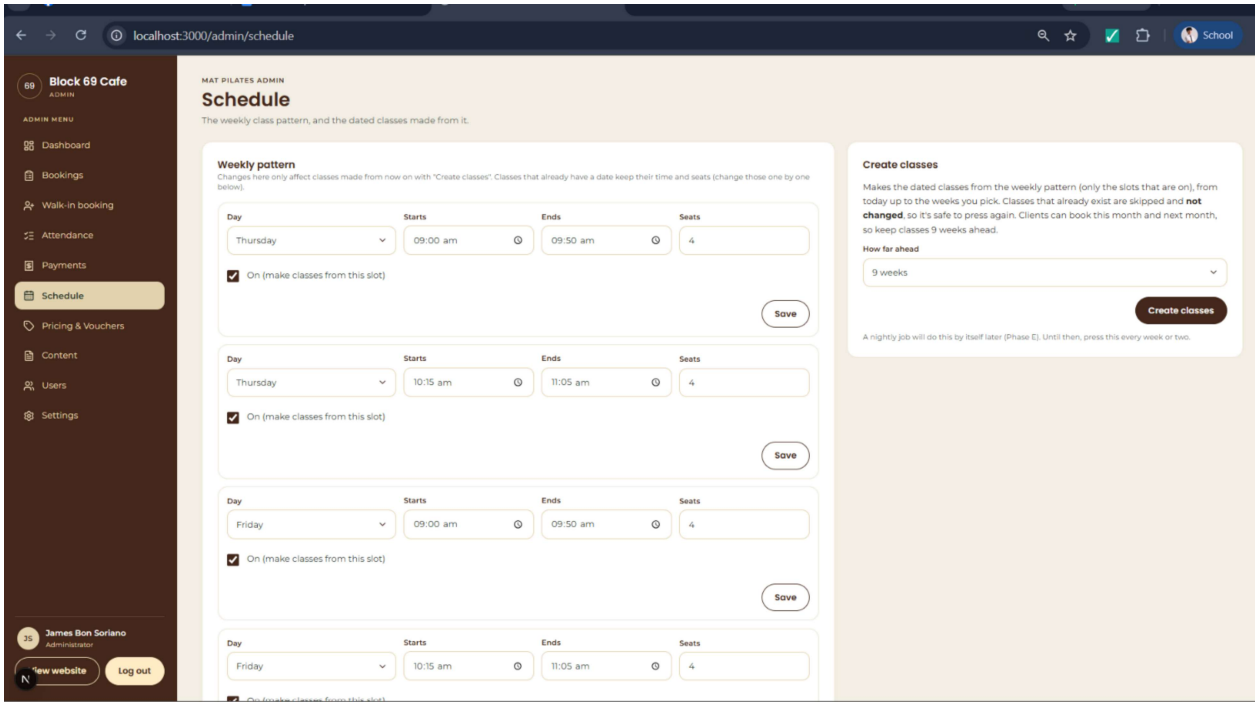

7.

Pagename: walk-in bookings page and attendance page

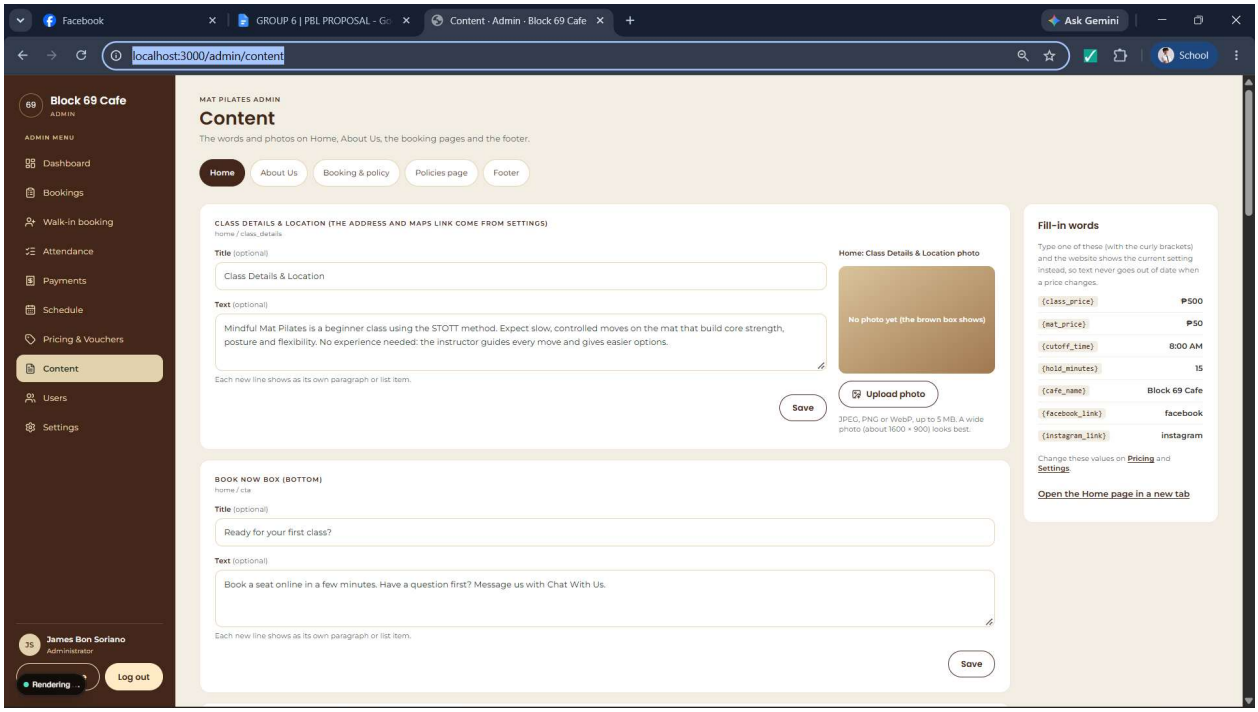

Pagelink: http://localhost:3000/admin/walk-in, http://localhost:3000/admin/attendance
Concern: the business didn't mention they have walkin bookings and for the attendance, it seems redundant since it is already shown in the bookings page.
Resolution: remove the walk-in bookings page and attendance page.
Prompter Comment: Will Do

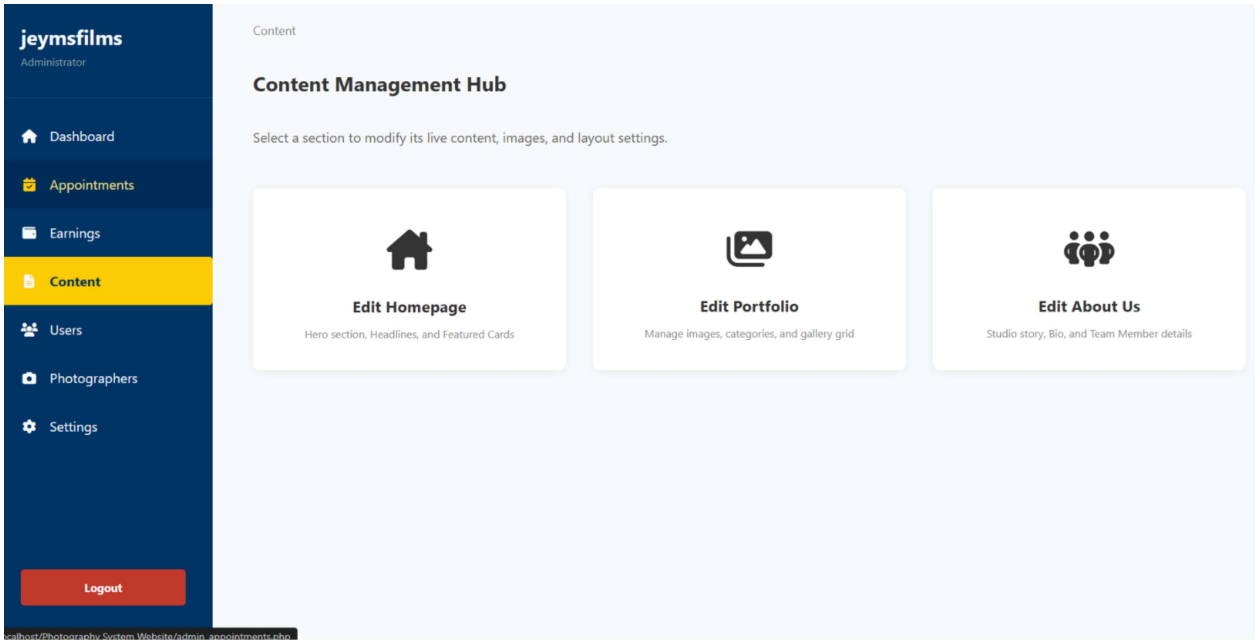

8.

Pagelink: http://localhost:3000/admin/schedule
Concern: The layout is too cluttered
Resolution: make the layout understandable like table of schedules and add pagination page
Prompter Comment: Will Do

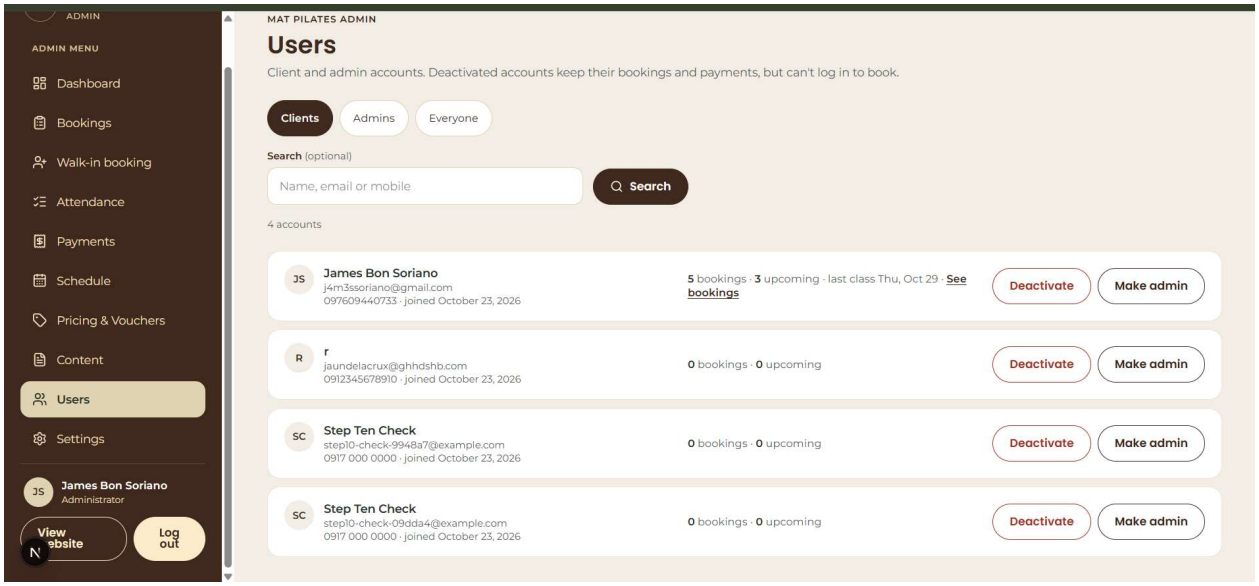

8.

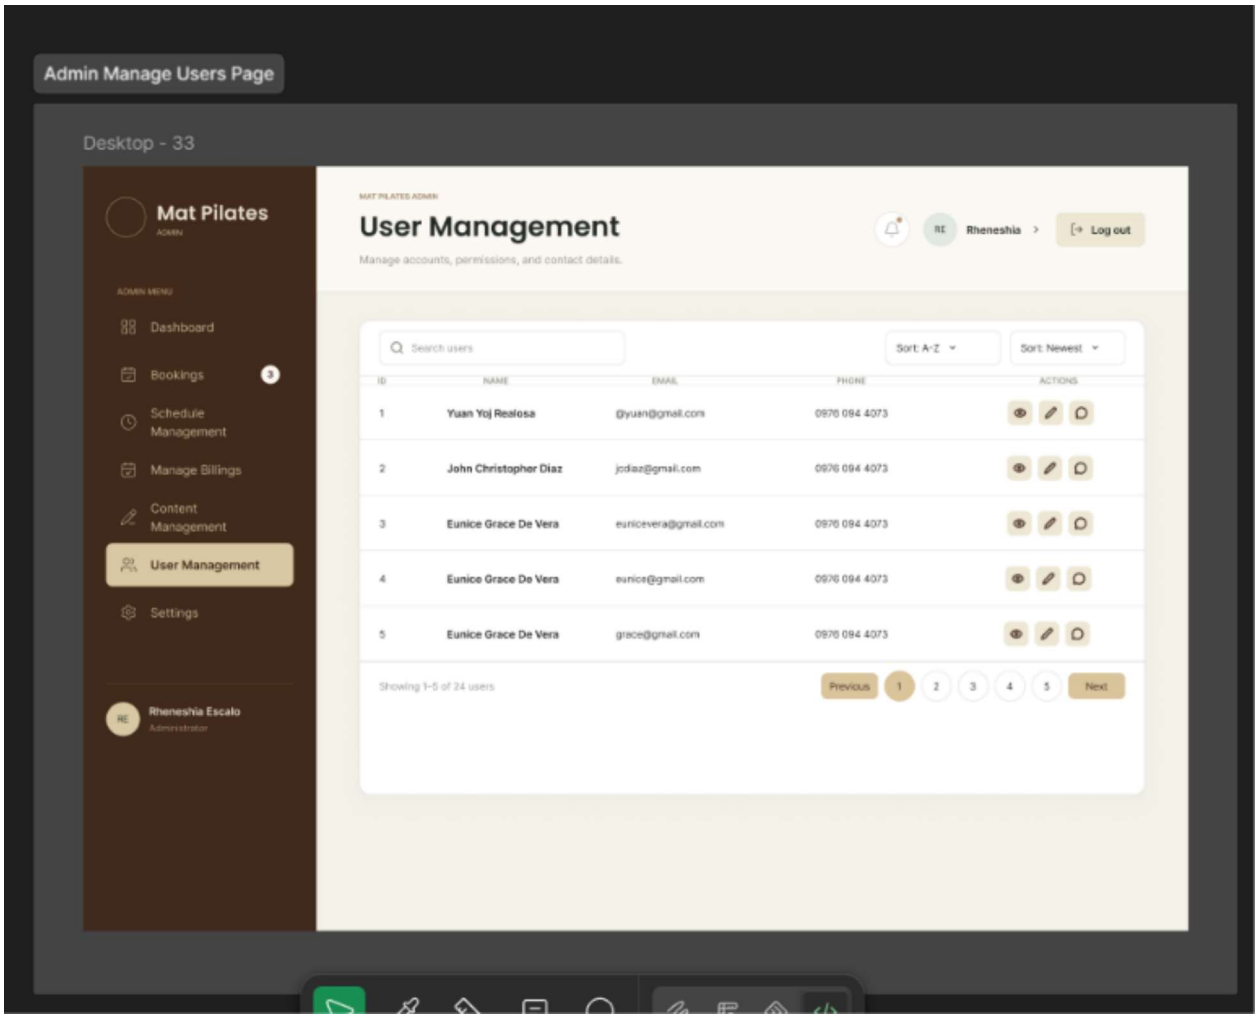

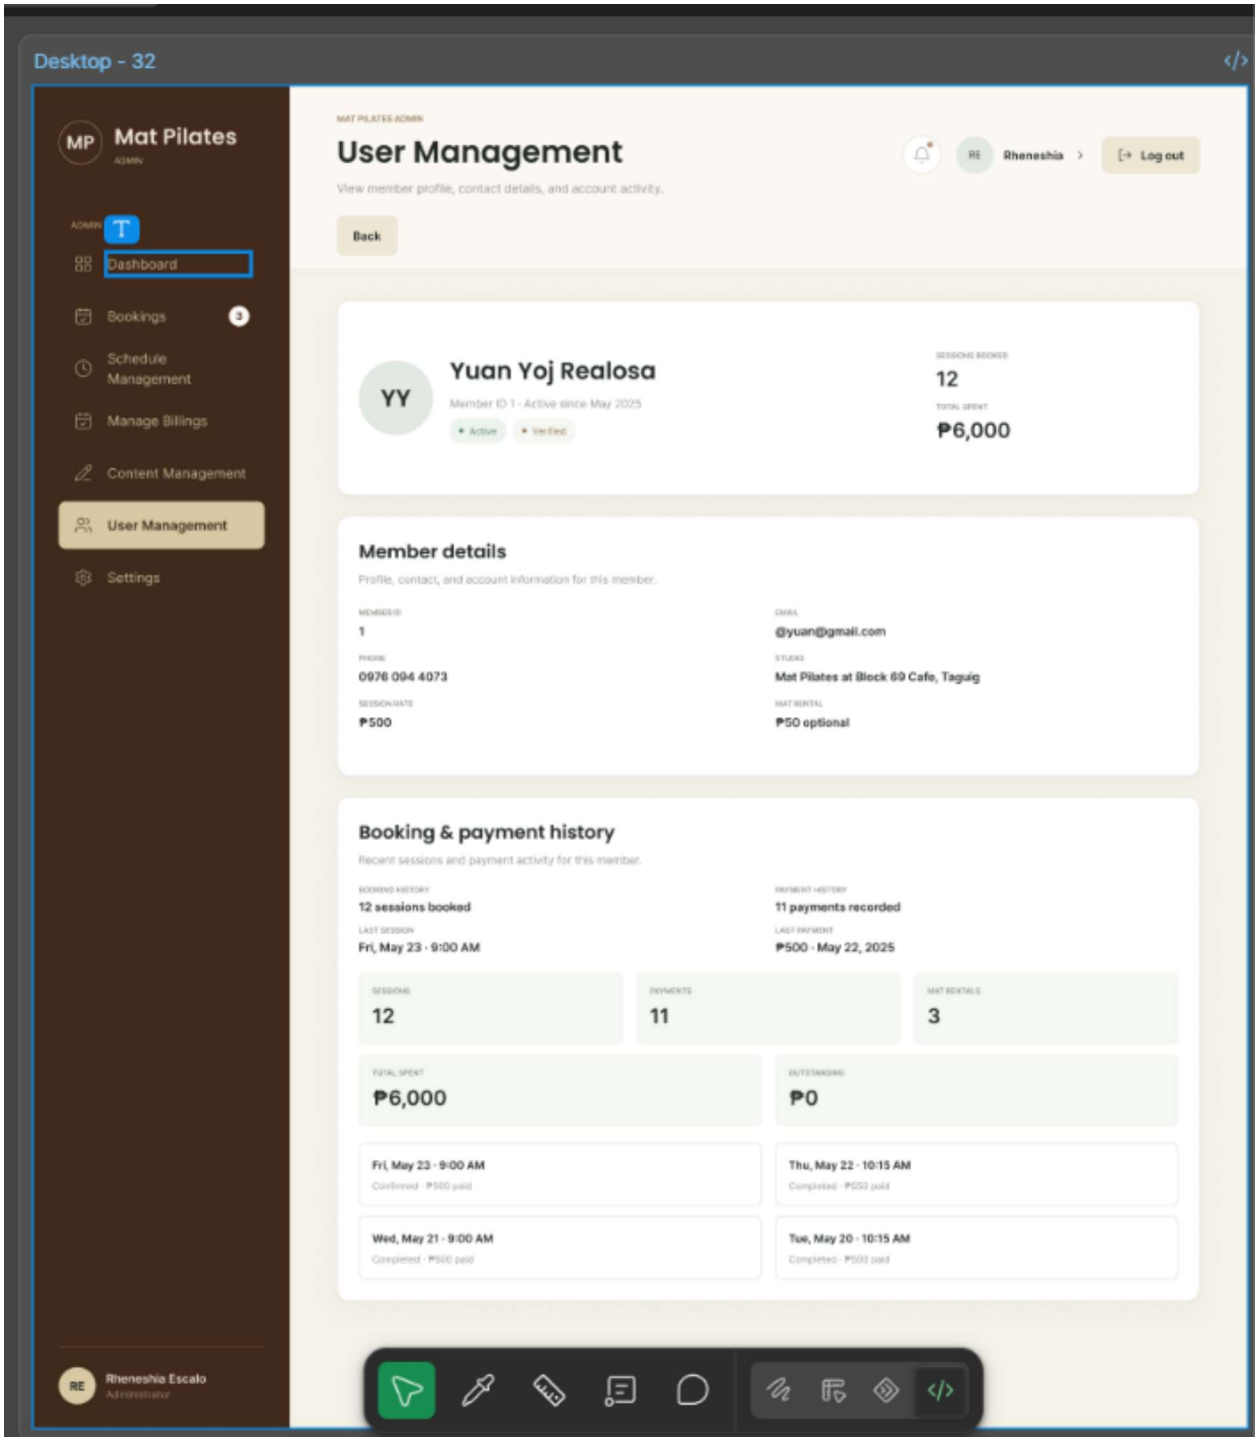

Pagelink: http://localhost:3000/admin/content
Concern: Content Management Page is too cluttered
Resolution: Make the Content Management have a hub first so that its separated each page just like in the image
Prompter Comment: Will Do

Pagename: users page
Pagelink: http://localhost:3000/admin/users
Concern: admin can deactivate client accounts and as well as make them as admins
Resolution: remove the “deactivate” and “make admin” button. Instead make a view button to see the account’s full details (refer to view users page in figma admin design)
Prompter Comment: Will Do

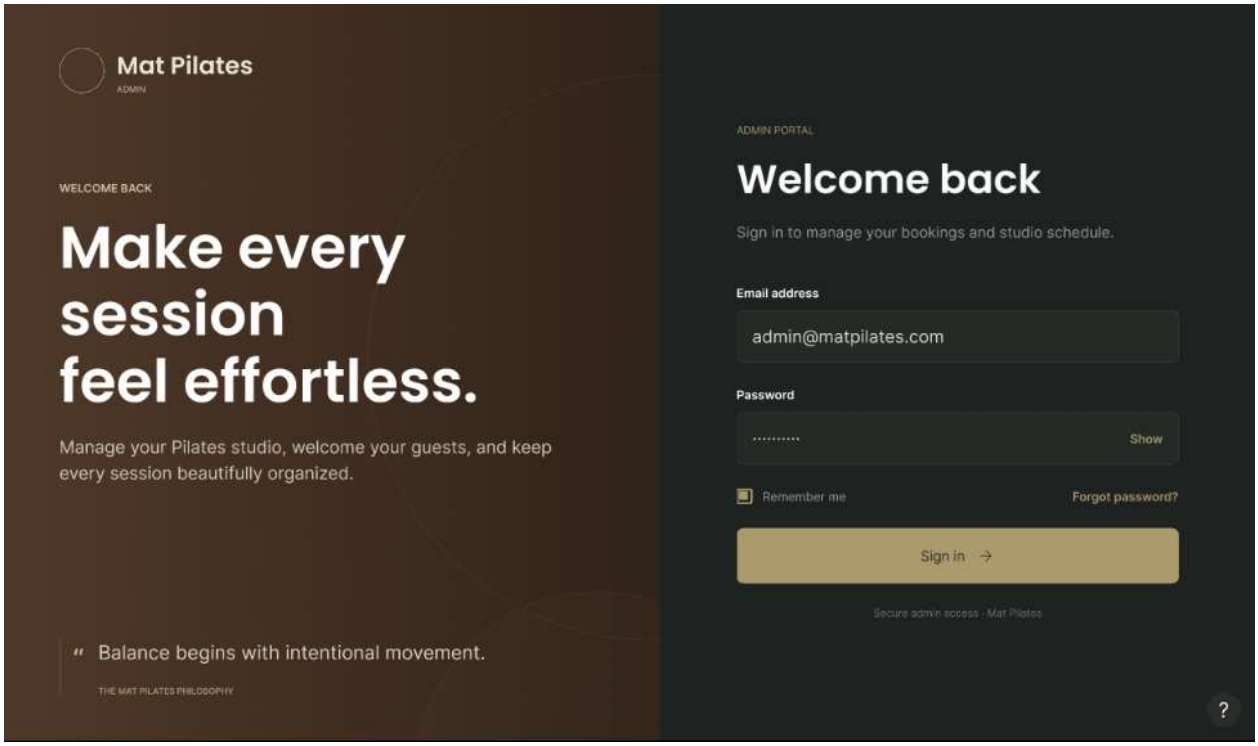

9.

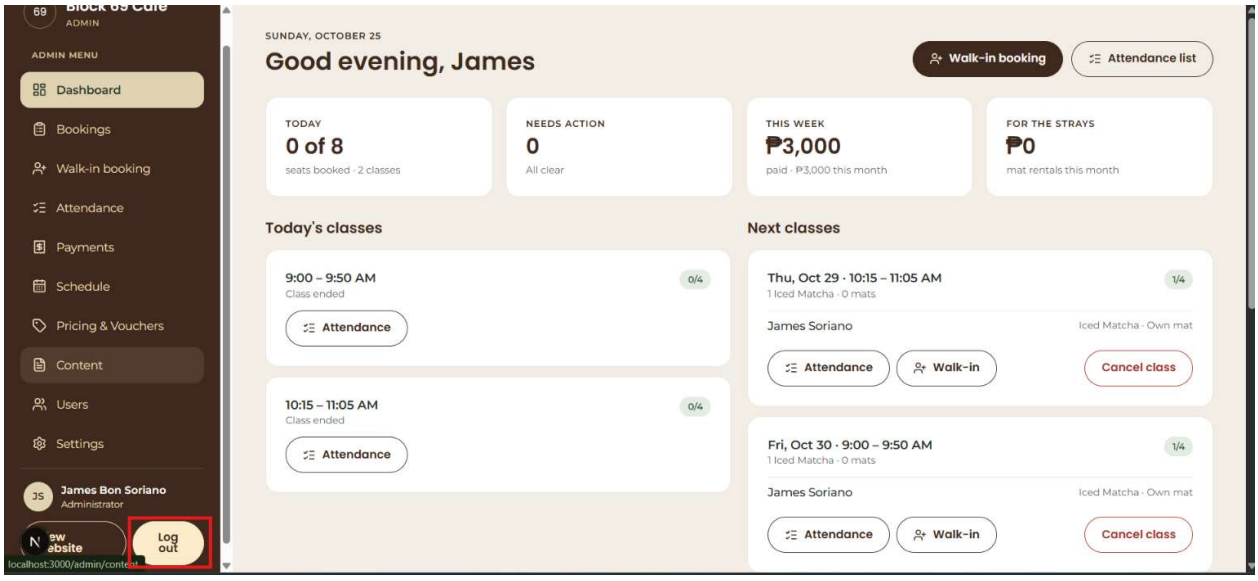

Pagename: Content Management Page
Pagelink: http://localhost:3000/admin/content
Concern: this fill-in words display is unnecessary
Resolution: Remove this fill in words side bar
Prompter Comment: Will Do

10.

Pagename: admin log in page
Pagelink: http://localhost:3000/admin/login?next=%2Fadmin
Concern: this is not our admin login design
Resolution: follow the design we created in figma (refer to the second image)
Prompter Comment:
11.

Pagename: admin homepage
Pagelink: http://localhost:3000/admin
Concern: when the admin logs out, it redirects to the client home page
Resolution: the “log out” button must redirect back to the admin login page

Prompter Comment: Will Do
